

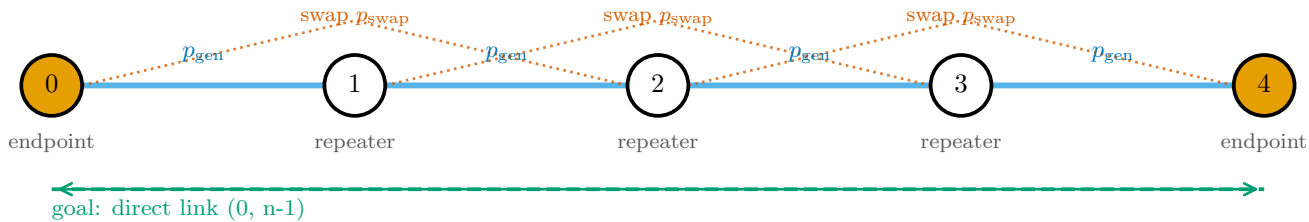

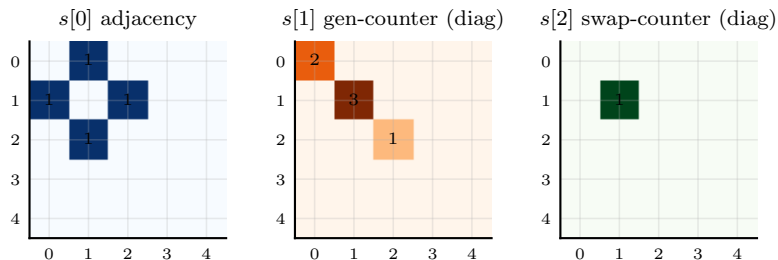

Figure 1 - Repeater-chain MDP (programmatic first draft)

(A) n -node repeater chain: elementary links + interior swaps

(B) state $s \in \mathbb{R}^{3 \times n \times n}$

$\mathbf{G}$: $a[i, i+1]$ one-off diagonals $\Rightarrow$ generate edge $(i, i+1)$

$\mathbf{S}$: $a[k, k]$ main diagonal (interior k) $\Rightarrow$ swap at k

(C) action $a \in \{0, 1\}^{n \times n}$
